

A "Reference Center" in Healthcare: **Memorial Antalya Hastanesi**

As Memorial Health Group we are located in 5 provinces with 11 Hospitals and 4 medical centers. In 2010, we came to Antalya which is tourism center of Turkey. When we opened the Memorial Antalya Hospital our goal was, appeal to whole Mediterranean region, not only to Antalya, and using the dinamism of tourism, offer an ethical and quality health care services to the whole region and our foreign patients. Over the past 5 years, I see that we attained our goal and came a long way. The important subjects which adds up to our success can be listed as follows;

JCI accreditation...

As Memorial Antalya Hospital, we have the JCI Accreditation Certification which assigns the quality standarts in health. We believe that rendering of services of a corporate understanding in Antalya which includes service quality approved by international organizations in the healthcare field makes all the difference.

Being a reference center...

When we opened Memorial Antalya Hospital we started out as a reference center for the whole region. Today, we see that we proceed successfully on this road as well. Seeing difference that we made with our services is understood by our patients day by day makes us happy.

The Remedy is Antalya...

We are admitting patients to our hospital from about 92 countries. We have patients coming from Turkish republics especially Azerbaijan, Kyrgyzstan, Uzbekistan, Arab countries, Balkan countries and developed countries such as England, Germany, Netherlands, Russia, USA.

Oncology Center...

Through the Memorial Health Group Antalya Oncology Center which we established in 2011, we witness with blissfulness the reversal of outlook on cancer which has been seen as "the plague of this age" and "desperation". With the Oncology Center what we have accomplished can be listed as;

- More than 12000 cancer patients were treated.
- We performed bone marrow transplantation in bone marrow transplantation center for approximately 250 patients in in nearly 3 years.
- More than 1000 cancer patients who came from Russia, Ukraine, Turkish republics, Iraq, Libya and European countries were treated successfully.
- We performed oncologic surgery and radiotherapy on approximately 2000 patients.
- For the first time in Turkey we conceptualized the chemotherapy units as "art house" and gave a new insight to medical treatment of cancer.
- We produced solutions which include total rehabilitation (physical rehabilitation, sexual rehabilitation, psychological rehabilitation) which has been absent in cancer treatment until now.
- We informed thousands of healthy people about cancer prevention, early diagnosis, further treatment modalities through "Cancer School" projects.

Now, with **the Second Cancer School** of Cyprus, we are coming to tell you all about the women cancers. Your warm hospitality continues to encourage us on this path that we set out. On the 16 of May at Grand Tulip Hotel in Nicosia we will be happy to be with all of you.

You are cordially invited...

With many thanks

Dr. Sevim Şuekinçi

Director of Memorial Antalya Hospital
